Some states do not allow the disclaimer or limitation of damages, so the disclaimers set forth above apply to the maximum extent permitted under applicable law.

IDEAlliance takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed or implicated with respect to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available. IDEAlliance does not represent that it has made any effort to identify any such rights. Information on IDEAlliance's procedures with respect to rights in IDEAlliance specifications can be found at the IDEAlliance website at [www.idealliance.org](http://www.idealliance.org). Copies of third-party claims of rights, assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this specification, can be obtained from the President of IDEAlliance at [patent-disclosure@idealliance.org](mailto:patent-disclosure@idealliance.org).

IDEAlliance requests interested parties to disclose any copyrights, trademarks, service marks, patents, patent applications, or other proprietary or intellectual property rights which may cover technology that may be required to implement this specification. Please address the information to the President of IDEAlliance at [patent-disclosure@idealliance.org](mailto:patent-disclosure@idealliance.org).

## Abstract

This document describes the messaging protocol for use by mailers and their consignees. The Mail.XML™ Transaction Protocol defines the roles and responsibilities of Shippers and Consignees and defines the format and method for message exchange. This messaging protocol is designed to be XML and Web-Services compliant and to work with FAST.

Mail.XML and Mail.dat are trademarks of IDEAlliance.

## About Mail.XML™

Mail.XML™ is bringing a paradigm change to the industry by increasing business function specific B2B (Business to Business) communication within the industry that supports automation and in the end enables cost avoidance and higher profits through improved competence and effectiveness of communication. Mail.XML is designed to increase efficiency and lower costs by removing many manual data entry processes and enabling quick near real time communication between business partners. Mail.XML currently supports container based scheduling, pick up and drop off business processes, as well as identifying different business entities responsible for performing different services such as quality of mailing, address correction, and delivery confirmation on a mailing.

The core focus of Mail.XML is communication between industry members and from industry to the final mail processing and delivery organization that delivers the mail to the end consumer, e.g., USPS.

In the next few versions of Mail.XML the focus moves across mailing supply chain channels, and includes advanced functions such as payment; automated verification; enabling first, second, and third party communication and incorporating presort planning, printing, and distribution processes.

## What's New in Mail.XML Version 19.0?

With this release, the Mail.XML Messaging Protocol moves to Version 19.0. This is a MAJOR release. This release supports ongoing USPS modernization and automation efforts for 2015.

Changes supported by MailXML 19.0 include:

- USPS plans to eliminate the Flats Sequencing System (FSS) pricing cells from price tables and postage statements and manage FSS mail preparation through existing mailing standards and labeling lists as outlined in DMM sections 705 and 708. The flats mailings qualify for the prices based on the sortation level and entry location, regardless of entry to FSS or non FSS zones. Destination entered working bundles at an FSS site will receive destination sectional center facility (DSCF) destination entry discounts. This applies to Standard Mail Flats, Periodicals Flats, and Bound Printed Matter Flats. Enumerations that specifically identify “FSS” are removed from the specification.
- The USPS plans to create a process by which mailers can provide additional supporting content (in the form of digital addresses or URLs) that can then be associated and displayed with the scanned images of mail pieces on the USPS Informed Delivery application dashboard, enhancing the customers experience. This applies to letters and flats of all classes.

- The USPS plans to redesign Collect on Delivery (COD) service to require that the package is held at the Retail office under the Hold for Pickup (HFPU) service. COD mail will be held at the Retail offices for recipient to pick up. The existing COD services will be relabeled as “COD HFPU” and “COD HFPU-Restricted Delivery.” This is a documentation change only.
- The USPS plans to add the EntryLocaleKey element to the abstractPeriodicalStatementDataType because the periodical child statements are also being generated by the entry locale key (in addition to the entry Postal code).
- :The USPS plans to require the MailingGroupID in the MailXMLHeaderInfo attribute group as part of cleanup as all current industry users populate this now.

## About MailXML Schema Modularization

Today Mail.XML messages are grouped into 8 message types.

- Transportation Messages (TM)
- Mailing Messages (MM)
- Data Distribution Messages (DD)
- Identification Messages (ID)
- Supply Chain Messages (SC)
- Informed Visibility (IV)
- System Messages
- Base: Shared simple types
- Definitions: Shared complex types and elements

The simple types shared across 2 or more modules are found in the Base schema. Likewise the shared definitions module contains complex type definitions and elements that are shared across 2 or more modules.

## MailXML Module Versioning Rules

The following versioning rules will be followed:

- The MailXML wrapper schema\*.xsd) will always be given the next higher version number (or Errara designation) when any update is made to base, defs or any module. The name of the .xsd file will indicate the new version and the new version number will be used in the namespace and target declarations:  
`xmlns:mailxml="http://idealliance.org/Specs/mailxml19.0/mailxml"`  
`targetNamespace="http://idealliance.org/Specs/mailxml19.0/mailxml"`
- When updates are made, only those modules that are updated will be given the next higher version number (or Errara letter designation).

- If updates are made to the base or defs, then the base and defs xsds will be given the next higher version number (or Errata designation) **and** all modules that call to them will also be given the next higher version number (or Errata designation).

For example:

- If the wrapper version is labeled as  
xmlns:mailxml="http://idealliance.org/Specs/mailxml15.0A/mailxml" then at least one of the XSDs is at same version such as filename = 'mailxml\_15.0.A.xsd' <- Errata A
- If the wrapper version is labeled as  
xmlns:mailxml="http://idealliance.org/Specs/mailxml15.0B/mailxml" then at least one of the XSDs is at same version such as filename = 'mailxml\_15.0B.xsd' <- Errata B
- If the wrapper version is labeled as  
xmlns:mailxml="http://idealliance.org/Specs/mailxml15.0/mailxml" then at least one of the XSDs is at same version such as filename = 'mailxml\_15.0.xsd' <- Major Version

## MailXML 19.0 XSD Modules:

The following MailXML XSD modules/namespaces are used:

- **mailxml\_tm.xsd:** This module contains all the transportation (or FAST) messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml tm:**
- **mailxml\_mm.xsd:** This module contains all the mailing messages (eDoc) and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml mm:**
- **mailxml\_iv.xsd:** This module contains informed visibility messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml iv:**
- **mailxml\_dd.xsd:** This module contains all the data distribution messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml dd:**
- **mailxml\_id.xsd:** This module contains all the identification messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml id:**
- **mailxml\_sc.xsd:** This module contains all the supply chain messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml sc:**
- **mailxml\_defs.xsd:** This module contains all the common definitions of attributes, elements and complex types that are used across two or more message types. **Namespace=mailxml defs:**
- **mailxml\_base.xsd:** This module contains simple types that are shared across two or more modules that make up mailxml. These can be considered a building block for any message group. **Namespace=mailxml base:**
- **mailxml.xsd:** This module contains the system messages of MailXML and is used to build custom profiles for MailXML. **Namespace=mailxml:**

## The Mail.XML™ 19 Messaging Documentation Set

The Mail.XML Messaging Specification has been organized into a set of documents. This *Schemas Specification* is one document in a set of documents that make up the Mail.XML Specification 16.0.

Updates in this Specification are NOT backwardly compatible with previous versions. Other documents in the specification set include:

- *Mail.XML™ 19.0: Transportation Messaging Specification* documents all transportation messages
- *Mail.XML™ 19.0: Mailing Messaging Specification* documents all mailing messages
- *Mail.XML™ 19.0: Informed Visibility Specification* documents all informed visibility messages
- *Mail.XML™ 19.0: Data Distribution Messaging Specification* documents all data distribution messages
- *Mail.XML™ 19.0: Identification Messaging Specification* documents all identification messages
- *Mail.XML™ 19.0: Supply Chain Messaging Specification* documents all supply chain messages
- *Mail.XML™ 19.0: System Messaging Specification* documents all systems and fault messages
- *Mail.XML™ 19.0: Simple Types Specification* documents all simple types used across MailXML messages
- *Mail.XML™ 19.0: Common Definitions Specification* documents all shared elements and complex types.
- *Mail.XML™ 19.0: Schemas* contains the .XSDs that make up the MailXML Messaging Specification

element **DeliveryApptMultiStopUpdateRequest/SubmitterTrackingID**

diagram	 A dashed rectangular box containing the text <code>mailxml_tm:SubmitterTrackingID</code> .
namespace	<a href="http://idealliance.org/Specs/mailxml19.0/mailxml_tm">http://idealliance.org/Specs/mailxml19.0/mailxml_tm</a>

element **DeliveryApptMultiStopUpdateRequest/ReturnInfo**

diagram	 A diagram showing the structure of the <code>mailxml_tm:ReturnInfo</code> element. It is represented by a dashed box containing a sequence container (a rectangle with a horizontal line and three dots) and a choice container (a dashed box with a vertical line and a plus sign). The sequence container is connected to the choice container. The choice container has three children: <code>mailxml_defs:returnInfoType</code> (a dashed box), <code>mailxml_defs:ErrorWarning</code> (a dashed box with a plus sign and a cardinality of <code>0..∞</code> ), and <code>mailxml_defs:ContainerErrorWarningBlock</code> (a dashed box with a plus sign and a cardinality of <code>0..∞</code> ). The <code>mailxml_defs:returnInfoType</code> element is further expanded to show a choice container with two children: <code>mailxml_defs:ConsigneeFacility</code> (a dashed box with a plus sign) and <code>mailxml_defs:ContainerErrorWarningBlock</code> (a dashed box with a plus sign and a cardinality of <code>0..∞</code> ).

**element DeliveryApptQueryResponse/QueryResults/Comment**

diagram	 A dashed box containing the text "mailxml_tm:Comment".
namespace	http://idealliance.org/Specs/mailxml19.0/mailxml_tm

**element DeliveryApptQueryResponse/QueryResults/AvailableSlots**

diagram	 A diagram showing the structure of the mailxml_tm:AvailableSlots element. It is a dashed box containing a sequence container (a box with three dots) that has three children: mailxml_tm:MailClass (1..∞), mailxml_tm:Perishable (1..∞), and mailxml_tm:AvailableHours (1..∞). The entire structure is enclosed in a yellow box labeled mailxml_tm:availableSlotType.
namespace	http://idealliance.org/Specs/mailxml19.0/mailxml_tm
children	<a href="#">mailxml_tm:MailClass</a> <a href="#">mailxml_tm:Perishable</a> <a href="#">mailxml_tm:AvailableHours</a>

**element DeliveryApptQueryResponse/QueryResults/ReturnInfo**

diagram	 A diagram showing the structure of the mailxml_tm:ReturnInfo element. It is a dashed box containing a sequence container (a box with three dots) that has three children: mailxml_defs:ConsigneeFacility (0..∞), mailxml_defs:ErrorWarning (0..∞), and mailxml_defs:ContainerErrorWarningBlock (0..∞). The entire structure is enclosed in a yellow box labeled mailxml_defs:returnInfoType.
namespace	http://idealliance.org/Specs/mailxml19.0/mailxml_tm
children	mailxml_defs:ConsigneeFacility mailxml_defs:ErrorWarning mailxml_defs:ContainerErrorWarningBlock

**element DeliveryApptQueryResponse/QueryError**

diagram	 A diagram showing the structure of the mailxml_tm:QueryError element. It is a dashed box containing a sequence container (a box with three dots) that has one child: mailxml_defs:ReturnInfo (0..∞). The entire structure is enclosed in a yellow box labeled mailxml_defs:queryErrorType.
namespace	http://idealliance.org/Specs/mailxml19.0/mailxml_tm
children	mailxml_defs:ReturnInfo

element **DeliveryApptShellCancelRequest**

diagram						
namespace	http://idealliance.org/Specs/mailxml19.0/mailxml_tm

element **OpenApptQueryRequest/SubmitterTrackingID**

diagram	 The diagram shows a single rectangular box labeled <code>mailxml_tm:SubmitterTrackingID</code> with a dashed border.
namespace	<a href="http://idealliance.org/Specs/mailxml19.0/mailxml_tm">http://idealliance.org/Specs/mailxml19.0/mailxml_tm</a>

element **OpenApptQueryRequest/ConsigneeFacility**

diagram	 The diagram shows a rectangular box labeled <code>mailxml_tm:ConsigneeFacility</code> connected to a dashed yellow box labeled <code>mailxml_defs:consigneeFacilityType</code> . Inside the dashed box, there is a complex structure of nested boxes and connectors. The top part contains <code>mailxml_defs:CompanyName</code> , <code>mailxml_defs:FacilityNumber</code> , and <code>mailxml_defs:FacilityAddress</code> (dashed). Below these is <code>mailxml_defs:FacilityAddress</code> (solid). Further down are <code>mailxml_defs:FacilityName</code> , <code>mailxml_defs:FacilityType</code> , <code>mailxml_defs:URL</code> , and <code>mailxml_defs:CommonContact</code> (dashed). A cardinality of <code>0..∞</code> is shown at the bottom right of the dashed box.
namespace	<a href="http://idealliance.org/Specs/mailxml19.0/mailxml_tm">http://idealliance.org/Specs/mailxml19.0/mailxml_tm</a>
