IDEAlliance requests interested parties to disclose any copyrights, trademarks, service marks, patents, patent applications, or other proprietary or intellectual property rights which may cover technology that may be required to implement this specification. Please address the information to the President of IDEAlliance.

Status of this Document

This document is an approved IDEAlliance Specification. It represents a significant step towards a stable specification suitable for widespread dissemination and implementation. It has been reviewed and approved by the ICE Authoring Group of IDEAlliance.

ICE 2.0 is the first major revision of the ICE Specification. As such, ICE 2.0 is not a compatible update to the ICE 1.0 specification. This update is a response to the implementation experience that has been gained over the past four years as well as the advancement in technology and W3C Recommendations. It differs from the ICE 1.0 and ICE 1.1 specifications in that it is specifically designed to support a Web Services model for syndication, has been modularized, incorporates XML Namespaces, and moves from an XML DTD to XML Schema.

As of this publication, the ICE Specification has been organized into a set of documents. This is one document in a set of documents (ICE Primer: Introduction and Overview, ICE Cookbook, Basic ICE Specification , Full ICE Specification, ICE Schemas and Scripts, and Guidelines to Extending the ICE Protocol) intended to jointly replace ICE 1.1. It has been developed by the IDEAlliance ICE Authoring Group. New documents may be added to this set over time.

The ICE Authoring Group and [IDEAlliance](#) recommend that implementations be updated to conform to the new ICE 2.0 Specification. The new specification embraces the latest Web technologies and W3C Recommendations. It provides added functionality that greatly enhances the usability of the protocol in a very wide range of syndication applications and can provide a substantial foundation for delivering syndication solutions in a Web Services environment.

Abstract

This document describes the Information and Content Exchange protocol for use by content syndicators and their subscribers. The ICE protocol defines the roles and responsibilities of Syndicators and Subscribers, defines the format and method of content exchange, and provides support for management and control of syndication relationships. We expect ICE to be useful in automating content exchange and reuse, both in traditional publishing contexts and in business-to-business relationships where the exchange eBusiness content must be reliably automated.

Table of Contents

Status of this Document.....	i
Abstract.....	i
1. Overview of ICE Schemas.....	3
2. ICE Simple Datatype Schema.....	4
3. ICE Message Schema	9
4. ICE Delivery Schema	12
5. ICE Subscribe Schema.....	18
6. Overview of ICE WSDL Samples	26
7. Sample Full ICE Syndicator WSDL Script.....	27
8. Sample Full ICE Subscriber WSDL Scripts	34

1. Overview of ICE Schemas

The ICE 2.0 Specification is made up of four (4) W3C Schema Definitions (XSD). Together these schemas define the datatypes and messages that make up the ICE Protocol. ICE XML Schemas can be found on the ICE Standard website:

<http://www.icestandard.org/Spec/V20/schema/icesimpledatatype20040801.xsd>
<http://www.icestandard.org/Spec/V20/schema/ice-message20040801d>
<http://www.icestandard.org/Spec/V20/schema/ice-subscribe20040801d>
<http://www.icestandard.org/Spec/V20/schema/ice-delivery20040801d>

2. ICE Simple Datatype Schema

```
<?xml version = "1.0" encoding = "UTF-8"?>
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema"

6. Overview of ICE WSDL Samples

In addition to the schema definitions for ICE 2.0, Sample WSDL1.2 scripts are provided as a reference. These scripts are non-normative and are simply an example of WSDL scripts to define operations and bindings Full ICE.

<http://www.icestandard.org/Spec/V20/wsdl/ice-subscriber-full20040801.wsdl>

<http://www.icestandard.org/Spec/v20/wsdl/ice-syndicator-full20040801.wsdl>

7. Sample Full ICE Syndicator WSDL Script

A Full ICE Syndicator WSDL script defines all operations, port types, bindings and services from the Syndicator point of view. Each input to the Syndicator and expected output for every operation, as well as the fault is specified in the WSDL script. See Figure 7.1.

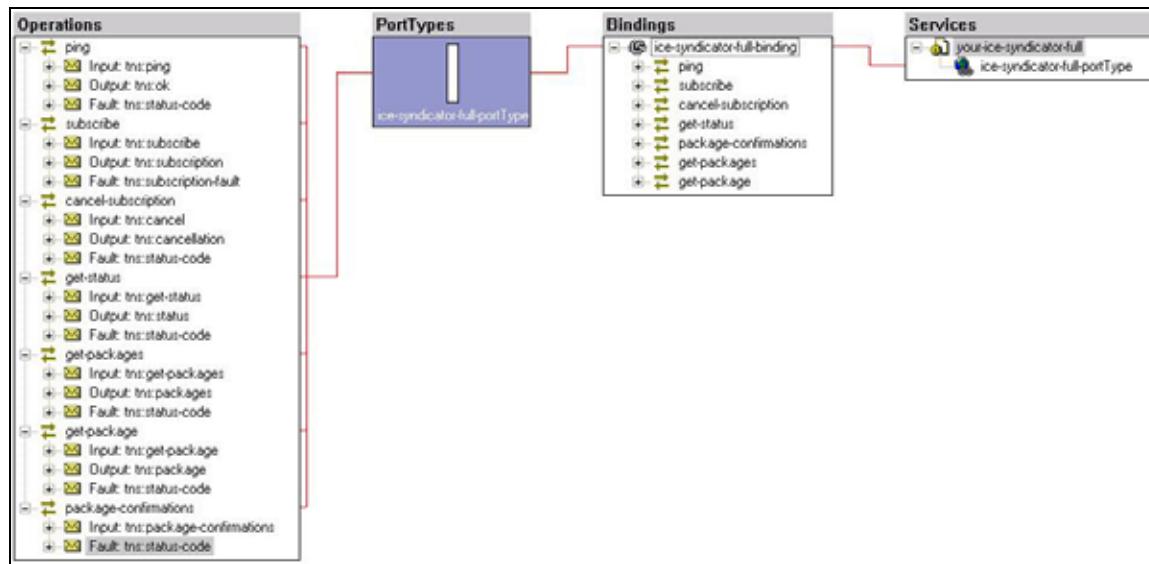

Figure 7.1 Diagram of the Full ICE Syndicator WSDL Script

8. Sample Full ICE Subscriber WSDL Scripts

A Full ICE Subscriber WSDL script defines all operations, port types, bindings and services from the Subscriber point of view. Each input to the Subscriber and expected output for every operation, as well as the fault is specified in the WSDL script. See Figure 8.1.

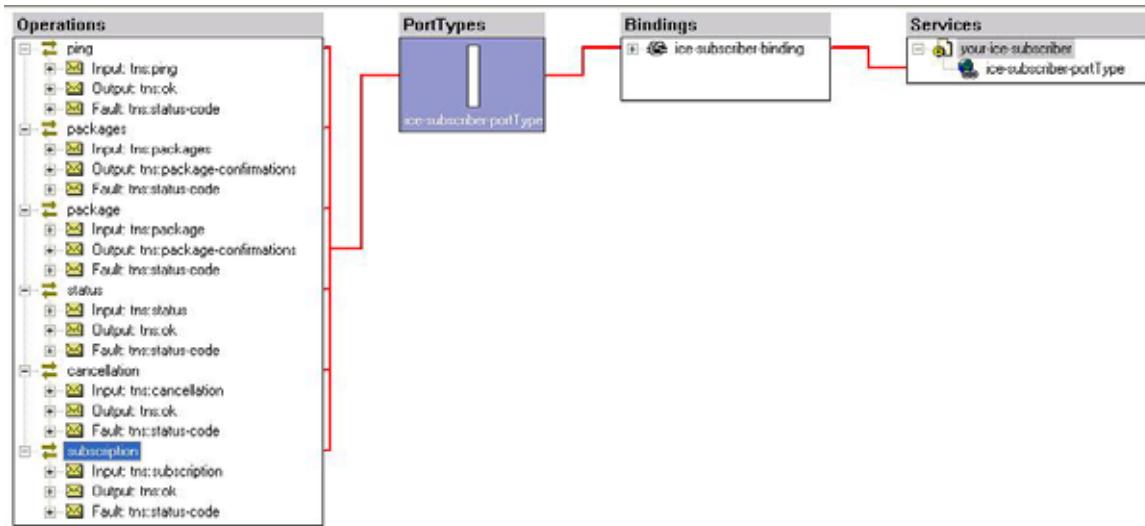

Figure 8.1 Diagram of the Full ICE Subscriber WSDL script.
